

Sun-Mar's composting toilets to be used at oil and gas sites throughout Canada

Burlington Ontario. Sun-Mar, the Global Composting Experts, will provide the latest composting toilet technology for remote mining sites throughout Canada via On-Site Facilities & Recycling Services. On-Site provides full service, environmentally-friendly portable washroom solutions for Canada's oil and gas industry. After an extensive search, On-Site has selected Sun-Mar's premium Excel composting toilet for use in its portable washrooms.

A changing world and greater environmental consciousness in the workforce dictates that the old port-a-potty is no longer the right solution to meet nature's needs in the field. On-Site's washrooms provide clean, sanitary and environmentally-friendly facilities, allowing companies to maintain strict levels of health and safety for employees.

Incorporating Sun-Mar's Excel composting toilet will enable On-site to meet specific targets demanded by their customers:

- no sewage or septic connection;
- no pumping out waste;
- all natural chemical-free toilets; and
- zero discharge.

"Sun-Mar toilets were an easy choice" says Shawn Hatala Manager of On-Site's Portable Washroom Division. "Following a thorough investigation of the options available, we selected the first-in-class Excel composting toilet for its simple, plumbing-free installation and no hassle operation. Sun-Mar toilets have been used for over 25 years – they are tried, tested and do the job."

"We're excited and honoured to be selected to provide our product to On-Site – one of Canada's leading oil and gas facilities providers," says Chris Muir, Canadian Manager, Sun-Mar. "On-Site's evaluation process was based on stringent requirements from lessons they've learned from years of delivering these services. The Excel composting toilet will enable On Site to provide sought-after services to the field in a cost-effective and environmentally-protective manner."
